

Counterbalance Forklift License Chandler

Counterbalance Forklift License Chandler - Forklifts, when operated by completely trained employees, are a major asset to companies. We offer a comprehensive training program including all factors of operating a powered lift device. Counterbalance forklift training provides operators of forklifts with the practical skill and knowledge needed to be able to operate forklifts efficiently and safely. The program offers a combination of classroom theory, participant observation and hands-on training within a warehouse-type surroundings. Training could be customized and/or on site.

The course goes through the lift truck essentials, rules and regulations, parts, load centres and factors affecting stability. Procedures about the general operation of the forklift is taught, in addition to circle checks, startup, shutdown, forward/reverse on level ground, and operating around other individuals. Load handling topics comprise selection of loads, load pickup and placements, loading and off-loading trailers and load security and integrity. Individuals participating will learn operational maintenance procedures, like refueling and recharging. Workplace safety concerns would be discussed. Individuals participating will know the environmental conditions affecting lift truck performance and be able to recognize possible hazards. Advanced training on propane handling could be incorporated.

Both employees and employers can face severe penalties if national and industry rules are not followed in the operation of forklifts. Employees who operate a forklift or reach truck must be knowledgeable about the guidelines about their safe operation. Training is recommended for anyone applying for work which requires forklift operation.

We provide in-class theory and hands-on training inside personalized, small classes. Training choices consist of entry level or refresher courses.

Entry-level Course Outline:

This course is for anyone entering the work force as an operator of a forklift. Students who are successful must complete the program and pass a series of practical and written tests. Subject matter consists of: essentials of powered lift trucks; general operating procedures; load handling; operational maintenance; workplace safety; basic regulations and rules.
