

Linde Forklift Parts

Linde Material Handling is one of the biggest manufacturing companies on the planet specializing in forklifts and warehouse equipment. For over 5 decades, the business has been raising the bar for driver assistance systems, fleet management, industrial trucks and high performance material flow solutions. Linde has developed a diverse set of equipment designed to take care of individual customer necessities.

As one of the world leaders in manufacturing warehouse equipment and forklifts, the business works in Europe under the Linde and Fenwick brands. Joining the KION Group in 2006, Linde is among one of the leading suppliers for Intralogistics by providing automation solutions. The KION Group is additionally the 2nd biggest manufacturer of industrial trucks across the world.

Operating in over one hundred countries around the world with its' own branches, Linde is widely recognized within the industry. There are assembly and production departments in China, Germany, the Czech Republic, France and the USA, along with over 700 service and sales retailers. The company's fleet is really expansive. There are approximately 80 series with roughly 9000 equipment options and up to 20 model variants. Linde builds the fleet and their vehicles specifically customized to their end users wants.

Linde additionally makes high-performance choices for intralogistics with warehouse equipment, electric and diesel forklift trucks, automation solutions, fleet management solutions, financing options and driver assistance systems. The company offers thorough operator training and forklift services.

There have been many improvements in automation, digital networking and the demand for more specific equipment across numerous industries; contributing influences that are driving technological improvement within the intralogistics realm. Linde Material Handling strives to help its' customers meet and exceed their material management challenges. Customer care is paramount at Linde. In fact, there is no product considered off the shelf. The company only implements technological innovations if they offer its' clients with a sustainable advantage.
